MAINTENANCE APPLICATION SERVICE (MAPP)

SUPPORTING PLANNED PREVENTATIVE FIRE MAINTENANCE

The 'preventative' maintenance application or 'MAPP' provides the responsible person with an additional tool to monitor a buildings passive fire compartment protection without the need for unplanned surveys and repairs.

Minimising the risk of damage to existing fire compartments as a result of destructive service maintenance penetration upgrades or neglect; necessary repairs can be made good with minimum disruption and significantly reduce remediation time and costs during the buildings service life.

- Are the buildings fire compartments compliant?
- Do you require further information, a use of MAPP trial or an initial assessment to determine potential maintenance issues?
- Are you considering a fire compartmentation survey for your building?
- Are new service installations or maintenance upgrades through existing passive fire compartments required?
- After sales services with periodic review and assessment of collated maintenance application data available.
